It is the responsibility of the trader to ensure their device is measuring accurately when it is used for trade transactions.  
Traders operating in eight industry sectors (retail petroleum, retail food, grain and field crops, forestry, downstream petroleum, fishing, dairy, mining) are required to have their devices examined on or before the next examination due date specified on this certificate.

If a device fails an examination (i.e. with an examination result of seized, rejected - error against consumer or warning - error against trader), the certificate may specify a next examination due date by which the device is required to be re-examined and certified to again meet legislative requirements. It is an offence under the *Weights and Measures Act* to use a device after the next examination due date has expired.
